

## Putt in your own yard

**Synthetic putting greens are a great activity for summer get-togethers with family and friends.**

If you love golf, wouldn't it be great to be able to practice putting on a professional-type golf green right in your own backyard? You do just that with Pro Putt Synthetic Turf golf greens.

This maintenance-free turf has dense, UV-treated polypropylene fibres with a urethane-coated secondary backing. Silicon sand covered with green, rounded top dressing fills the turf fibres and cushions shots, imitating real grass. The turf is a maintenance-free alternative to real grass.

It also is an environmentally friendly option. The synthetic turf is virtually indestructible. No watering, mowing or pesti-

cides are required. Even Canada's own PGA pro, David Morland IV, has endorsed this system.

Greens range from 12x15 ft to golf course size, and include everything from turf to flag sticks. Best of all, if you move, you can take it with you. Complementary enhancements like sand traps, chipping pads, fringe turf, driving nets and landscaping can be incorporated to suit each homeowner's budget.

Putting practice is a great activity for summer get-togethers with family and friends. For details, call Pro Putt at 877-776-7888, or visit [www.pro-putt.com](http://www.pro-putt.com). 🍁
