

Window films make **good** sun-sense

Large windows are an important feature of many homes. However, south-, west- or east-facing windows can allow in excessive heat and glare that make rooms uncomfortable. Drapes and blinds help but they obstruct both the light and the view. 3M Sun Control Films are a proven way to make the interior space more 'people friendly'.

Sun control films help save energy and money with both air conditioning costs in the summer and heating costs in the winter. By reducing excessive solar heat in the summer and reducing heat loss in the winter, your home's cooling

and heating system can run more efficiently. 3M is the world's largest manufacturer of film and its products carry a lifetime warranty.

Fading upholstery, drapes and carpets are not a problem when you use sun control films, as they reduce the effects of harmful UV rays. In addition, new technology means that film is now available that is virtually clear from the interior and exterior. 🌿
