

The beauty of **stone** – only better

Stone is a popular material in today's housing market and is used on both interior and exterior renovations. One of the new, affordable alternatives to real or cast stone is a decorative line of simulated stone siding made from structural polyurethane. It has the look of real stone but at a fraction of the weight, weighing less than a pound per square foot. *"Just 'Tri' to tell the difference,"* says TriMatrix Stone.

The highly insulated stone panels can be used indoors or out and can be mounted using just screws. That means no mortar and no mess. No waterproofing, painting or staining is necessary. With a much lower cost than standard stone or veneers, you can be as creative as you want.

The siding comes in a variety of decorative stone panels and profiles, including brick, slate and stucco. 

■ *To learn more about this unique line of products, visit TriMatrix Stone Inc., 111 Zenway Blvd., Unit 6, in Vaughan, or call toll-free 1-888-856-5156. You can check out the website at www.trimatrix.ca or e-mail info@trimatrix.ca to obtain more details.*
